

ABSTRACT

A holder for a beverage or drink container having an appearance suggestive of a high-heeled shoe comprises a base having a substantially planar lower surface and an opposite upper surface containing a receptacle configured to slidably receive the lower end portion of the container. An elongated handle is disposed adjacent to the base, and includes an upper end disposed above the upper surface of the base, and an opposite, substantially planar lower end disposed coplanar with the lower surface of the base. The base is rigidly connected to the upper end of the handle by an arcuate web. First, second and third straps are arranged on the holder to capture the container in the holder and restrain it against lateral movement. The holder can be manufactured inexpensively using a wide variety of manufacturing techniques and a wide variety of strong, decorative materials.
